

Mr.
Christian Dobre

Patient: Tudor, Daniela
Diagnosis: vagal nerve schwannoma?

Hannover, 28.05.09/jh

Dear Sir,

thank you for your confidence and sending us the medical reports and images of Daniela.

After careful evaluation of the sent data we believe that this is a case of a schwannoma originating from the vagal nerve. Further you report that it increased in size over the last months.

We recommend therefore surgical removal of the tumor which in our institute is performed under continuous electrophysiological monitoring.

If you decide to be operated at our institute I am ready to do it any time.

For an admission date please contact our international patient admissions department under +0049 511 27092 157 or <mailto:pm.international@ini-hannover.de>.

Please avoid anti-coagulant medication (Aspirin etc.) 10 days before admission and oral hypoglycaemics (Metformin, etc.) for 3 days before admission. If you have any further questions please do not hesitate to contact us.

Yours Sincerely,

Madjid Samii, MD, PhD
President
